## 5 Pin Configuration and Functions

### Pin Functions

| PIN           |     | DESCRIPTION  |
|---------------|-----|--|
| NAME          | NO. |  |
| BOOT          | 9   | Bootstrap capacitor connection. Connect a minimum of 0.1- $\mu$ F, 16-V, X7R ceramic capacitor from BOOT to BOOT_R pins. The bootstrap capacitor provides the charge to turn on the control FET. The bootstrap diode is integrated.  |
| BOOT_R        | 8   | Return path for HS gate driver, connected to $V_{SW}$ internally.  |
| ENABLE        | 3   | Enables device operation. If ENABLE = logic HIGH, turns on device. If ENABLE = logic LOW, the device is turned off and both MOSFET gates are actively pulled low. An internal 100-k $\Omega$ pulldown resistor will pull the ENABLE pin LOW if left floating.  |
| FCCM          | 10  | This pin enables the Diode Emulation function. When this pin is held LOW, Diode Emulation Mode is enabled for sync FET. When FCCM is HIGH, the device is operated in Forced Continuous Conduction Mode. An internal 5- $\mu$ A current source will pull the FCCM pin to 3.3 V if left floating.  |
| IOUT          | 1   | Output of current sensing amplifier. $V(IOUT) - V(REFIN)$ is proportional to the phase current.  |
| $P_{GND}$     | 4   | Power ground, connected directly to pin 13.  |
| $P_{GND}$     | 13  | Power ground.  |
| PWM           | 12  | Pulse width modulated tri-state input from external controller. Logic LOW sets control FET gate low and sync FET gate high. Logic HIGH sets control FET gate high and sync FET gate low. Open or Hi-Z sets both MOSFET gates low if greater than the tri-state shutdown hold-off time ( $t_{3HT}$ ).   |
| REFIN         | 2   | External reference voltage input for current sensing amplifier.  |
| TAO/<br>FAULT | 11  | Temperature analog output. Reports a voltage proportional to the die temperature. An ORing diode is integrated in the IC. When used in multiphase application, a single wire can be used to connect the TAO pins of all the ICs. Only the highest temperature will be reported. TAO will be pulled up to 3.3 V if thermal shutdown occurs. TAO should be bypassed to $P_{GND}$ with a 1-nF, 16-V, X7R ceramic capacitor. |
| $V_{DD}$      | 5   | Supply voltage to gate driver and internal circuitry.  |
| $V_{IN}$      | 7   | Input voltage pin. Connect input capacitors close to this pin.   |
| $V_{SW}$      | 6   | Phase node connecting the HS MOSFET source and LS MOSFET drain - pin connection to the output inductor.  |

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
